The Division of Vascular Oncology and Metastasis offers a position for a

Postdoctoral Scientist

Description

The Helmholtz Alliance “Preclinical Comprehensive Cancer Center” (www.helmholtz-pccc.de) has been implemented as a nationwide consortium to develop and validate mouse models of cancer that better mimic the cause of human cancer and the response to therapy. A postdoctoral position is now available in the laboratory of Prof. Hellmut Augustin (see www.augustinlab.de for details). Work in our laboratory within the PCCC is aimed at (i) performing an in vivo screen for novel inhibitors of angiogenesis, (ii) validating a novel conditional model of liver tumorigenesis for anti-angiogenic target validation, and (iii) rationally developing in preclinical models novel regimen for combination therapies and multimodal scheduling of anti-tumor therapies.

Your profile:

The successful candidate should have a strong background in the fields of vascular biology and/or tumor biology. Solid hands-on experience in cell and molecular biology will be essential. Experience in in vivo methodology in genetic mouse models or in tumor models is highly desirable. The candidate holds a PhD or equivalent degree and is able to pursue independent research. Although the initial appointment will be for a two-year postdoctoral period, the position has career development potential with an extension up to six years. Thus, candidates just having completed their PhD training are invited to apply as much as more experienced postdoctoral scientists.

We offer:

DKFZ is the largest biomedical research institute in Germany and offers an excellent research environment with state of the art equipment and core facilities. The successful candidate will be given solid technical support and he/she may be involved in the training of graduate students (if desired). The institute is very international and command of the German language is not essential. We invite applications from enthusiastically committed and talented postdoctoral scientists who share our unconditional passion for science aiming at pursuing cutting-edge work at the forefront of science in an international team.

Duration:

The position is initially limited for two years with extension for up to four years.
